APPLICATIONS
- Process Monitoring
- Indoor Application

SELECTION GUIDE
BeanGateway® Selection Guide

HOW DOES IT WORK?

Wireless technology IEEE 802.15.4
Ethernet/LAN interface with a server
Advanced UPS (Uninterruptible power supply) with integrated rechargeable Lithium battery
Data logger based on Micro-SD® (option)

// MAIN FEATURES
The **BeanGateway® Ethernet** is used to build and manage **Beanair®** wireless sensor network. It can manage queues for every network element (**BeanDevice®**). As a gateway, it controls the external access to the network through a highly secured authentication procedure. It supports the conversion of data exchanged, compression and IP connectivity with the network thereby reducing the intelligence required in these platforms, maintenance and therefore the associated cost.

The **BeanGateway® Ethernet** is also equipped with various communication interfaces with the customer's IT infrastructure (RS232, Ethernet - TCP / IP / UDP / DHCP / DNS). With a client application TCP / IP, it can easily connect to a local application server (via the Ethernet).

**Advanced uninterruptible power supply (UPS)**

The **BeanGateway® Ethernet** operates with an external power supply (DC 8-28V). An integrated rechargeable battery with a capacity of 950mAh is used as an UPS battery (uninterruptible power supply). The internal battery provides instantaneous protection from external power supply interruptions, the wireless sensor network activity & Ethernet LAN activity are maintained during this time (3h00 to 3h30 approximately). An internal buzzer emits a beep sound every 2 seconds in case the external power supply is disconnected.
The BeanGateway® Ethernet provides a WSN diagnostic tool useful for resolving some common networking troubleshooting:

- **Energy Scan** for choosing the more appropriate RF Channel
- **BeanDevice® PER (Packet Error Rate)** calculation
- **LQI (Link Quality Indicator)** between the BeanGateway® Ethernet and the BeanDevice®

The BeanGateway® Ethernet has the capability to backup the WSN mapping & context. Thus the user can operate the WSN without any use of PC or IT server. All the data measurements are stored on an external Memory (Micro-SD® card).

The BeanGateway® Ethernet provides a WSN diagnostic tool useful for resolving some common networking troubleshooting:

- **Energy Scan** for choosing the more appropriate RF Channel
- **BeanDevice® PER (Packet Error Rate)** calculation
- **LQI (Link Quality Indicator)** between the BeanGateway® Ethernet and the BeanDevice®

### Option(s)

- All the User data are stored on an external memory (Micro-SD® technology):
- Measurement storage for Wireless Sensor Network (network configuration, measurement, alarms notifications …);
- Maximum storage capacity (2Go);
- CSV files management (for exporting data on Excel® and Access®)
